# ABOUT US

Psittacus is an online education skill learning platform. We believe that learning STEAM - (Science, Technology, Engineering, Arts, & Maths) education at the early stages of academic life can help children to develop critical thinking & problem solving skills. Psittacus - The African grey parrot usually found in the range from Kenya to the eastern part of Ivory Coastal is the most intelligent birds that can be trained to apply the concepts to solve complex problems.This was enough for us to establish & name our platform as Psittacus, where children can learn to overcome real-life scenarios and problems through STEM courses along with overall development.

The updated education policy has introduced coding & development courses in the kids curriculum. Coding is already a basic literacy in this modern era of technology and usually consists of problem solving skills & how the latest technology functions. With the advancement in technology it is crucial to have an inquisitive mind & our conventional courses will encourage your kids to be curious.The courses at Psittacus develop coding skills in a child to enhance their logical, problem solving skills, creativity, Maths, writing and confidence along with communications & collaboration,

The educators, reformers and professionals believe that 21 century skills, habits and a proper set of knowledge is critically important for success in making careers in every field. Psittacus allows students to connect their learning in these critical areas together with arts practices, elements, design principles, and standards to provide the whole pallet of learning at their disposal. STEAM learning removes limitations and replaces them with wonder, critique, inquiry, and innovation.

# OUR
# CORE VALUES

### Encouraging
We believe the children need nurturing from the early stages of life. They can grow seamlessly when you invest early education in their schedule. With our coding courses we foster your kids in the most optimized way.

### Excellence
With the completion of every course, the children aim higher in today's competitive world and strive to achieve the unachievable.

### Innovation
Education has found a new way to learn from the internet. With our amazing ideas infused in the courses, the kids will find better ways to comprehend technology while learning the logics.

### Inventive
As the world is changing at a rapid pace adapting new ways is the heart of our approach. With our courses students need to be able to take what they know from experience and apply it for unprecedented tasks.

### Integrity
We maintain transparency in our processes & commitments to groom children's skills with additional learning. With keeping the future of the kids in our mind we have developed the courses that support and enhance the regular curriculum and work as a language of the future with many benefits.

# WHY
# PSITTACUS

### Programmes That Uplifts Your Child

Our courses allow kids to think critically while solving complex & real-life problems. With the need of being innovative at the moment, this curriculum allows them to create learning environments that offer them to be creative in their own way. Children now individually pursue challenges at their own pace and skill level.

### Courses that Develop Problem Solving Skills

Creative problem solving is a strong skill to have in the 21st century. Creativity doesn't come as a trait in an individual, it is something that educators can cultivate so children can explore possibilities and consider different variables while being challenged in real life.

### Implementation of STEAM

With STEAM related courses we teach children to embrace mistakes & misunderstanding while learning, solve complex problems in their way, connect to the new way of thinking, encourage application of knowledge, build problem solving & creativity skills & help them to adapt to new things.

# VISION & MISSION

## Our Vision

We visioned to provide experiences that motivate all students to be more practical while solving real life problems. We want children to be capable with decision making, problem solving, lifelong learning, new creation and innovations through our interactive coding. Children need to relate to the real world while solving complex problems along with learning in less time. At the tender age learning 21 century skills help them being more determined in whatever they learn in their regular curriculum.

## Our Mission

To be a leading Education platform that can deliver STEAM originated life long learning lessons for all students in India and other regions. We started Psittacus to foster problem solving skills at a very young age to boost children's confidence while solving real life scenarios. With the implementation of our courses on the young mind we want them to have a look at the different ways to value systematically thinking through problems. They can apply the information they learn along the way about technology and engineering to figure out the best solutions.

# DIRECTOR'S
## CORNER

While mentoring our child on different aspects of problems, we realized that there is a need for a program that provides a counterfeit & challenges beyond the traditional curriculum. As correctly stated by Albert Einstein "Imagination is more important than knowledge. Knowledge is limited. Imagination encircles the world". Being the founder of Psittacus & a responsible parent we had to take current & future scenarios into account that made us understand the importance of 21st Century skills in our kids daily routine. It gives us great pleasure to introduce you to Psittacus that covers the STEAM related programmes to uplift your child in the advanced era.

Once we developed these courses we saw the difference it made in our child's life. They were no longer afraid while solving mathematics solutions, and started following new approaches to solve the same scenarios. At Psittacus we want your child to have the same benefits so they never feel left behind in this modern world. We have taken extra measures to develop a site in a hope that it will become a valuable source for kids along with leadership qualities and exponential growth.
